

# Trusted solutions for common hose & pipe repair problems.

Get the basics on the hose and pipe repair category:

- Assisting you in hose installations and pipe repairs, this category contains laundry hoses, pipe repair clamps and other related products.
- Laundry hoses, which connect your water supply to your washing machine, need to be inspected periodically and also need replaced if cracks, cuts, abrasions, etc. are present.
- As a preventative maintenance tactic, you can also attach a lint trap to your washing machine discharge hose, preventing excess lint from flowing into your drains that would cause clogging and expensive plumbing bills.

Fittings for laundry hoses are standard 3/4" hose threads.

# Hose & Pipe Repair Problems

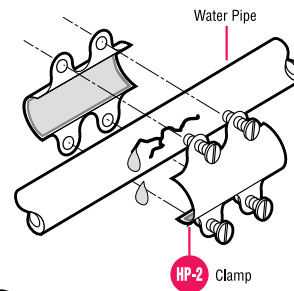

DETERMINE THE PROBLEM	DISCOVER THE CAUSE	FIND YOUR SOLUTION
-----------------------	--------------------	--------------------

A rigid water pipe leaks from a hole or crack	Apply a pipe repair clamp to temporarily fix the problem until you can install a new pipe	<b>HP-2</b>
Water leaks from the hose fitting	Unscrew fitting and replace hose washer	<b>HP-4</b>
Need to hook-up a garden hose to an iron pipe water supply line	Use a hose adapter. This fitting will convert the iron pipe threads to hose threads so that you can attach a garden hose	<b>HP-5</b>
Need to connect two garden hoses to one spigot	Install a "Y" connector. This will convert a single outlet into a dual outlet	<b>HP-6</b>
Lint from washing machine discharge keeps clogging drain	Install a lint trap on end of discharge hose	<b>HP-7</b> <b>HP-12</b>

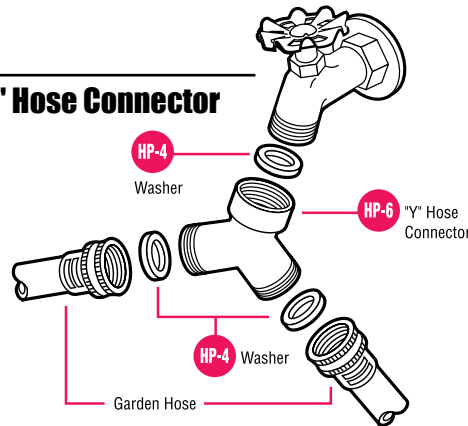

PlumbCraft® products are packaged and marked to help you find plumbing repair parts quickly. Just use the chart to determine the problem, discover the solution and find the appropriate parts. Then, look for the part codes on every package to easily find what you need.

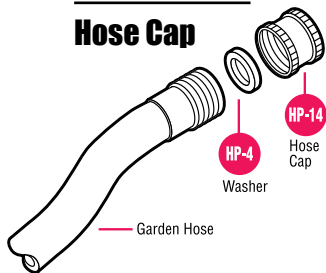

## Pipe Repair Clamp

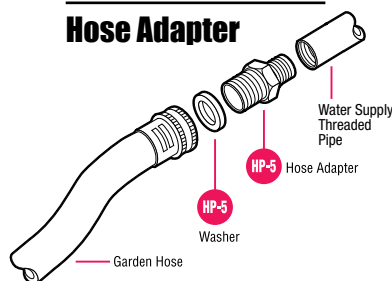

## "Y" Hose Connector

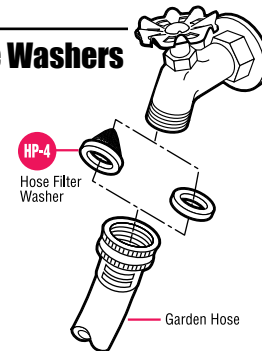

## Hose Cap
